information reporting*

"By having detail each and every month our Mobility Costs have been kept in line with our users, and has saved both Accounting and IT valuable time so IT can focus on other projects."

"Our CFO has found the STT Solution to be a valuable tool."

Challenge

This large organization has approximately 300 Mobile Devices in the field and needed to manage and control the expenses related to mobile usage. The Company wanted more financial visibility, the ability to develop meaningful polices and to monitor compliance. Furthermore, their Finance group wanted a custom feed that can be imported into their accounting system.

Solution

STT quickly implemented their flagship solution, MethodiCall. MethodiCall was configured to automatically generate a battery of comprehensive reporting to IT and Finance. The monthly reporting identifies areas of waste, abuse and cost savings opportunities.

MethodiCall has a strong track records of creating end user visibility & accountability and creates an environment where employees "self police" themselves. The STT solution provided meaningful insight into mobile expenses from cost centre managers to the CFO.

Results

- *Significant reduction in administrative effort (well over 6 hours per month)*
- *20% cost savings identified within the first few days of implementation*
- *Provides accountability and cost allocation*
- *Implementation was painless*
